

Statement of identification according to Directive 97/129/EC for self-adhesive label materials by UPM Adhesive Materials in EMEIA region

The identification of packaging materials laid out in [97/129/EC](#) (the European Union's Commission Decision of 28 January 1997 pursuant to European Parliament and Council Directive [94/62/EC](#) on packaging and packaging waste) is currently voluntary in the European Union (EU). From January 1, 2023, with Italian Legislative Decree 116 of September 3, 2020, the identification of packaging material entering the Italian market becomes mandatory in business-to-business transactions.

The codes for label face materials and label release liner materials are identified separately as these components are manually separable from each other. Related to self-adhesive label materials by UPM, we are in the process of adding the nature of the packaging material directly on our delivery notes for all shipments within the EMEIA region. Before the nature of the label material is available via the delivery note, please find included in this document a list of face materials (table 1) and a list of liner materials (table 2) with their respective codes according to Directive 97/129/EC. Should you not be able to identify the desired code from below tables, please refer to your local sales or customer service representative.

Be aware that the identification of the nature of a label material alone does not suffice to determine the recyclability of a package. Self-adhesive labels typically do not determine the waste stream of a final package (the main body of the packaging does, e.g., HDPE bottle, PET tray), but they should be considered regarding possible impacts on sorting packaging waste into the right recycling stream as well as the impact they can have on yield of recyclate in the reprocessing stage of recycling. For further information on recyclability, please contact your sales or customer service representative.

Disclaimer: This information is based on UPM's most up-to-date knowledge and experience. The information given is for guidance only and subject to change without notice. UPM Adhesive Materials cannot assume any liability for damage caused through its use. This statement does not constitute any warranty, expressed or implied and is only intended for the UPM Adhesive Materials customer and cannot therefore be transferred to any third party. UPM Adhesive Materials cannot assume any liability for using its products in conjunction with other materials and the customer must make their own qualification and suitability testing before using materials by UPM Adhesive Materials as part of the customer products. Suitability of materials by UPM Adhesive Materials in customer products is solely the customer's responsibility. All its products are sold subject to the [general sales conditions of UPM Adhesive Materials](#), available at labelmaterials.upm.com and upon request. In case of any discrepancies, the English version of this document shall prevail. This publication replaces all previous versions published.

Dichiarazione di identificazione secondo la Direttiva 97/129/CE per i materiali autoadesivi per etichette di UPM Adhesive Materials nella regione EMEIA

L'identificazione dei materiali di imballaggio prevista dalla [97/129/CE](#) (la Decisione della Commissione dell'Unione Europea del 28 gennaio 1997 ai sensi della direttiva [94/62/CE](#) del Parlamento e del Consiglio Europeo sugli imballaggi e i rifiuti di imballaggio) è attualmente su base volontaria nell'Unione Europea (UE). Dal 1° gennaio 2023, con il Decreto Legislativo 116 del 3 settembre 2020, l'identificazione del materiale di imballaggio che entra nel mercato italiano diventa obbligatoria nelle transazioni tra imprese.

I codici dei frontali dei materiali per etichette e dei supporti siliconati, sono assegnati individualmente in quanto questi componenti sono separabili manualmente l'uno dall'altro. Per quanto riguarda i materiali autoadesivi per etichette di UPM, stiamo procedendo per aggiungere la natura del materiale di imballaggio nelle nostre liste di carico per tutte le spedizioni all'interno della regione EMEIA. Fin quando i codici che identificano la natura del materiale di imballaggio non saranno disponibili tramite la bolla di consegna, si prega di consultare nel documento allegato l'elenco dei frontali (tavola 1) e l'elenco dei supporti (tavola 2) con i relativi codici abbinati secondo la Direttiva 97/129/CE. Se non si dovesse riuscire ad identificare il codice desiderato dalle tabelle sotto allegate, fare riferimento al proprio rappresentante locale di vendita o al servizio clienti.

E' importante considerare che l'identificazione della natura del materiale della sola etichetta non è sufficiente per determinare la riciclabilità di un imballaggio. Le etichette autoadesive in genere non determinano il flusso di rifiuti di un imballaggio finale (è l'imballaggio primario a determinarne la destinazione, ad es. bottiglia in HDPE, vassoio in PET), ma devono essere considerate in base all'impatto che determinano all'atto del conferimento alla raccolta differenziata in termini di resa del trattamento del rifiuto. Per ulteriori informazioni sulla riciclabilità, contattare il proprio rappresentante di vendita/assistenza clienti.
